PROFILE

I am a passionate, results-driven software engineer with a strong hands-on track record in the field.

My passion for coding is what drives my commitment to writing clean and efficient code that adheres to the principles of DRY, SOLID and best practices.

Below you can find the technologies I have been using for my projects. You can find my projects on my github page github.com/GFilippos or my portfolio website <https://gfdevo.com>

SKILLS

REACT/ANGULAR/TYPESCRIPT

JAVA/SPRINGBOOT3

REDUX/NGRX

DBMS(MONGO,POSTGRES)

GIT/JIRA/POSTMAN

HTML/SASS/TAILWIND

PROBLEM SOLVING

EXPERIENCE

Software Engineer

Interamerican | 11/2022 – currently working

In my role as a Software Engineer, I played a vital role in designing, optimizing and enhancing web applications to meet modern performance standards. My responsibilities included:

React Frontend Designing and Refactoring: I led efforts to design, refactor and modernize the frontend codebase, utilizing React to enhance the user interface, optimizing overall performance and improve responsiveness.

REST API Transformation: revamping RESTful APIs, making them more efficient and responsive. This involved designing and implementing API endpoints that provided faster data retrieval and a seamless user experience.

Performance Optimization: My focus on performance optimization extended to both frontend and backend services. I employed best practices, including code splitting, lazy loading, and SEO optimizations, to reduce load times and improve overall application speed.

React Developer

Aqurance | 5/2022 – 10/2022

As a frontend developer, I specialized in using React to develop responsive and user-centric web applications for pharmaceutical representatives worldwide. I worked closely with cross-functional teams to create intuitive interfaces and integrate our software seamlessly with the Salesforce CRM system, enhancing user experience and driving sales success.

Software Engineer

Hellenic Navy | 4/2021 – 4/2022

While fulfilling my military service obligation I was appointed to a bureau where I had the privilege to work as a junior software engineer maintaining and optimizing the national surveillance system. Working closely with senior developers and getting exposed to a robust codebase in java and javascript provided me with a solid foundation in both.

EDUCATION

Electrical and Electronic Engineer(B.Sc)

My pursuit of a Bachelor degree (B.Sc.) in Electrical and Electronic Engineering, with an integrated Master's in Computer Systems, has cultivated my understanding of computer systems and developed my problem-solving skills significantly. Currently I am a senior student and expect to graduate in approximately one year.

Certificates in Udemy

1. Modern React with Redux
2. SpringBoot3, Spring 6 & Hibernate
3. Java In Depth – Data Structures & Algorithms
4. Angular – The Complete Guide 2023
5. Rest API Automation with Java
6. Microservices with NodeJS and React
7. Microservices Clean Architecture Kafka, Kubernetes
